This is because we do not hear about it often, and we also do not live in water so we do not care what happens there. Also, we mostly get as much fish as we would like from the market so what is the big deal? I think we will know how catastrophic overfishing is and how we are heading down a steep slope to a global disaster if we do not act quickly enough.

Studies have found that intense programs of strength training can help even weak older people double their strength, as well as enable them to walk faster and climb stairs more easily. And muscle isn't all you gain – strength training can help combat osteoarthritis, depression, and risk factors for heart disease and diabetes.
