The selection of the appropriate protective clothing for any job or task (A) is / are usually dictated by an analysis or assessment of the hazards presented. The expected activities of the wearer as well as the frequency and types of exposure, are typical variables that input into this determination. For example, a firefighter is exposed to a variety of burning materials. Specialized multilayer fabric systems are thus used (B) to meet / meeting the \*thermal challenges presented. This results in protective gear that is usually fairly heavy and essentially provides the highest levels of protection against any fire situation. In contrast, an industrial worker who has to work in areas (C) where / which the possibility of a flash fire exists would have a very different set of hazards and requirements. In many cases, a flame-resistant coverall worn over cotton work clothes adequately addresses the hazard.

In India, approximately 360 million people—one-third of the population—live in or very close to the forests. More than half of these people live below the official poverty line, and consequently they depend crucially on the resources they obtain from the forests. The Indian government now runs programs aimed at improving their lot by involving them in the commercial management of their forests, in this way allowing them to continue to obtain the food and materials they need, but at the same time to sell forest produce. If the programs succeed, forest dwellers will be more prosperous, but they will be able to preserve their traditional way of life and culture, and the forest will be managed sustainably, so the wildlife is not depleted.

⇒ The Indian government is trying to (A) the lives of the poor who live near forests without (B) the forests.

In the absence of facial cues or touch during pandemic, there is a greater need to focus on other aspects of conversation, including more emphasis on tone and inflection, slowing the speed, and increasing loudness without sounding annoying. Many \*nuances of the spoken word are easily missed without facial expression, so eye contact will assume an even greater importance. Some hospital workers have developed innovative ways to try to solve this problem. One of nurse specialists was deeply concerned that her chronically sick young patients could not see her face, so she printed off a variety of face stickers to get children to point towards. Some hospitals now also provide their patients with ‘face-sheets’ that permit easier identification of staff members, and it is always useful to reintroduce yourself and colleagues to patients when wearing masks.

Once they leave their mother, primates have to keep on making decisions about whether new foods they encounter are safe and worth collecting.

- (A) By the same token, if the sampler feels fine, it will reenter the tree in a few days, eat a little more, then wait again, building up to a large dose slowly. Finally, if the monkey remains healthy, the other members figure this is OK, and they adopt the new food.
- (B) If the plant harbors a particularly strong toxin, the sampler’s system will try to break it down, usually making the monkey sick in the process. “I’ve seen this happen,” says Glander. “The other members of the troop are watching with great interest—if the animal gets sick, no other animal will go into that tree. There’s a cue being given—a social cue.”
- (C) Using themselves as experiment tools is one option, but social primates have found a better way. Kenneth Glander calls it “sampling.” When howler monkeys move into a new habitat, one member of the troop will go to a tree, eat a few leaves, then wait a day.

Following Japan’s defeat in World War II, the majority of ethnic Koreans (1-1.4 million) left Japan. By 1948, the population of ethnic Koreans settled around 600,000. These Koreans and their descendants are commonly referred to as Zainichi (literally “residing in Japan”), a term that appeared in the immediate postwar years. Ethnic Koreans who remained in Japan did so for diverse reasons. Koreans who had achieved successful careers in business, the imperial bureaucracy, and the military during the colonial period or who had taken advantage of economic opportunities that opened up immediately after the war—opted to maintain their relatively privileged status in Japanese society rather than risk returning to an impoverished and politically unstable post-liberation Korea. Some Koreans who \*repatriated were so repulsed by the poor conditions they observed that they decided to return to Japan. Other Koreans living in Japan could not afford the train fare to one of the departure ports, and among them who had ethnic Japanese spouses and Japanese-born, Japanese-speaking children, it made more sense to stay in Japan rather than to navigate the cultural and linguistic challenges of a new environment.

Cold showers are any showers with a water temperature below 70°F. They may have health benefits. For people with depression, cold showers can work as a kind of gentle electroshock therapy. The cold water sends many electrical impulses to your brain. They \*jolt your system to ① increase alertness, clarity, and energy levels. Endorphins, which are sometimes called happiness hormones, are also released. This effect leads to feelings of well-being and ② optimism. For people that are obese, taking a cold shower 2 or 3 times per week may contribute to increased metabolism. It may help fight obesity over time. The research about how exactly cold showers help people lose weight is ③ clear. However, it does show that cold water can even out certain hormone levels and heal the \*\*gastrointestinal system. These effects may add to the cold shower’s ability to lead to weight loss. Furthermore, when taken regularly, cold showers can make our circulatory system more efficient. Researchers have been interested in the habitual ways a single individual copes with conflict when it occurs. They've called this approach conflict styles. There are several apparent conflict styles, and each has its pros and cons. The collaborating style tends to solve problems in ways that maximize the chances that the best result is provided for all involved. The pluses of a collaborating style include creating trust, maintaining positive relationship, and building commitment. However, it's time consuming and it takes a lot of energy to collaborate with another during conflict. The competing style may develop hostility in the person who doesn't achieve their goals. However, the competing style tends to resolve a conflict quickly.

Water and civilization go hand-in-hand. The idea of a "hydraulic civilization" argues that water is the unifying context and justification for many large-scale civilizations throughout history. For example, the various multi-century Chinese empires survived as long as they did in part by controlling floods along the Yellow River. One interpretation of the hydraulic theory is that the justification for gathering populations into large cities is to manage water. Another interpretation suggests that large water projects enable the rise of big cities. The Romans understood the connections between water and power, as the Roman Empire built a vast network of \*\*aqueducts throughout land they controlled, many of which remain intact. Cultural interpretations are usually made on the basis of \_\_\_\_ rather than measurable evidence. The arguments tend to be circular. People are poor because they are lazy. How do we “know” they are lazy? Because they are poor. Promoters of these interpretations rarely understand that low productivity results not from laziness and lack of effort but from lack of capital inputs to production. African farmers are not lazy, but they do lack soil nutrients, tractors, feeder roads, irrigated plots, storage facilities, and the like. Stereotypes that Africans work little and therefore are poor are put to rest immediately by spending a day in a village, where backbreaking labor by men and women is the norm.

A very well-respected art historian called Ernst Gombrich wrote about something called “the beholder’s share”. It was Gombrich’s belief that a viewer “completed” the artwork, that part of an artwork’s meaning came from the person viewing it. So you see—there really are no wrong answers as it is you, as the viewer who is completing the artwork. If you’re looking at art in a gallery, read the wall text at the side of the artwork. If staff are present, ask questions. Ask your fellow visitors what they think. Asking questions is the key to understanding more—and that goes for anything in life—not just art. But above all, have confidence in front of an artwork. If you are contemplating an artwork, then you are the intended viewer and what you think matters. You are the only critic that counts.

Argentina is the world's eighth largest country, comprising almost the entire southern half of South America. Colonization by Spain began in the early 1500s, but in 1816 Jose de San Martin led the movement for Argentine independence. The culture of Argentina has been greatly influenced by the massive European migration in the late nineteenth and early twentieth centuries, primarily from Spain and Italy. The majority of people are at least nominally Catholic, and the country has the largest Jewish population (about 300,000) in South America. From 1880 to 1930, thanks to its agricultural development, Argentina was one of the world's top ten wealthiest nations.

Sonja Henie is famous for her skill into a career as one of the world's most famous figure skaters—in the rink and on the screen. Henie, winner of three Olympic gold medals and a Norwegian and European champion, invented a thrillingly theatrical and athletic style of figure skating. She introduced short skirts, white skates, and attractive moves. Her spectacular spins and jumps raised the bar for all competitors. In 1936, Twentieth-Century Fox signed her to star in One in a Million, and she soon became one of Hollywood's leading actresses. In 1941, the movie 'Sun Valley Serenade' received three Academy Award nominations which she played as an actress. Although the rest of Henie's films were less acclaimed, she triggered a popular surge in ice skating. In 1938, she launched extravagant touring shows called Hollywood Ice Revues. Her many ventures made her a fortune, but her greatest legacy was inspiring little girls to skate.
