Organic farming is a system of agriculture that uses environmentally sound techniques for raising crops and livestock that are free from most synthetic pesticides, growth hormones, and antibiotics. Organic farmers typically rely on pesticides and fertilizers derived from plants, animal wastes, and minerals. They incorporate biological methods, such as the use of one organism to suppress another, to help control pests. The methods used organic farming increase soil fertility, balance insect populations, and reduce air, soil, and water pollution. Organic farming is a small but rapidly growing sector of agriculture in the United States. Sales of organic foods increased from \$5 billion in 2004 to \$ 9.5 billion in 2007. Organic food sales now make up 7 to 9 percent of retail food sales but are projected to increase to 20 percent by the year 2008.
