My surgeon looks tired: He has been overwhelmed with patients and his beeper is going off every 15 minutes. He is a witty man, but sometimes his wit is unwelcome. “The insurance company wants me to put you out in the snow tomorrow afternoon,” he tells me after I have been in the hospital for more than a week. I’m terrified, because I have no idea where to go. I cannot walk, or even lift my leg a few inches. The hospital social worker strikes me as an idiot, but my complaints about her only annoy my surgeon. “I have to work with these people,” he tells my friend who is also a doctor when she mercifully intercedes on my behalf and arranges for me to be transferred to another hospital. “If you say one negative thing, they get defensive,” she tells me later. Since it is not wise to be regarded as a whiner or to be too demanding, my friend advises cunning strategies. “You can frame your questions as those of a frightened patient. If you, as a patient, suggest that you might like to control even part of the situation, then you are considered difficult.”

- ① Doctors should understand the mental state of their patients.
- ② The hospital social workers should cooperate with the doctors.
- ③ Patients should appear to be submissive and humble in the hospital.
- ④ The hospital should have a good relationship with the insurance company.

The book, *Dialogue Concerning the Two Chief World Systems*, was completed and published in 1632, with the full backing of the censors—and was immediately greeted throughout Europe as a literary and philosophical masterpiece. Soon the Pope, realizing that people were seeking the book as a convincing argument in favor of Copernicanism, regretted having allowed its publication. The Pope argued that although the book had the official blessing of the censors, Galileo had nevertheless contravened the 1616 decree. He brought Galileo before the Inquisition, who sentenced him to house arrest for life and commanded him to publicly renounce Copernicanism. For a second time, Galileo acquiesced. Galileo remained a faithful Catholic, but his belief in the independence of science had not been crushed.

- ① Galileo’s book was banned by the censors.
- ② Galileo believed in the independence of science.
- ③ Galileo strongly refused to give up Copernicanism.
- ④ Galileo’s book became immediately abandoned by the people.

Atmospheric scientists first used the term ‘greenhouse effect’ in the early 1800s. At that time, it was used to describe the naturally occurring functions of trace gases in the atmosphere and did not have any negative connotations. It was not until the mid-1950s that the term greenhouse effect was coupled with concern over climate change. And in recent decades, we often hear about the greenhouse effect in somewhat negative terms. The negative concerns are related to the possible impacts of an enhanced greenhouse effect. This is covered in more detail in the Global Climate Change section of this Web site. It is important to remember that without the greenhouse effect, life on earth as we know it would not be possible.

You can conclude from the paragraph that _____.

- ① we cannot live without the greenhouse effect
- ② the greenhouse effect did not occur until the mid-1950s
- ③ atmospheric scientists first discovered ‘greenhouse effect’ in the early 1800s
- ④ the term ‘greenhouse effect’ began to carry negative connotations in the early 1800s
